Two Trailers In One: The Range Road RR600

The Range Road RR600 trailer is a versatile and high-performance tool for ranchers, farmers, and landowners. With its dump box, this utility trailer is ideal for transporting dirt, rocks, and firewood, while its capacity to haul logs and lumber makes it a perfect addition to your equipment. The RR600 can be towed behind your ATV/UTV or tractor, enabling you to haul goods with ease. Removing the two hinge pins and sliding the box off allows you to haul lumber and logs, while the four removable log support posts provide added height for your loads. The trailer also features 2 front outriggers for added stability while loading/unloading. The trailer's length is adjustable, making it safe to haul lumber or logs up to 12' long.

Heavy Duty Construction

The RR600 is designed to be a heavy-duty, highly versatile trailer for acreage owners to maintain their properties and woodlots. The stamped galvanized steel dump box can easily be tilted to a 65° angle using the mechanical winch to lift. The frame and chassis of this trailer are made of 4mm thick square tubing and are seam welded for maximum durability. The entire chassis is also galvanized and powder-coated to prevent corrosion.

Designed For Independent Functionality

The trailer tongue is fitted with a pivoting ball hitch, allowing for independent movement between the trailer and your machine. Plus, it features a greaseable fitting for easy maintenance.

Tandem Axle System

The RR600 comes with a heavy-duty, tandem walking beam axle system that is equipped with ATV wheels and tires. This ensures that you can easily navigate your way through virtually any terrain.
